Mexico

He also observed sand, gravel, and clay beneath the drift, of which he says page 97 that they are not readily classified, but probably should be referred to the Pliocene. Osborn 232 Evolutionary evidences ; by S.

Full text of the Geological Society of

The South Dakota side also presents numerous and extensive terraces, but very frequently these blend with the flat plain, which is here prominent, and it is then difficult to determine their limits.

A Giant Carbon Dioxide Accumulation in the Norphlet Formation, Pisgah Anticline, Mississippi

Other fossils in this zone correspond to large fragments of stromatoporoids and to mollusk specimens similar to *Chondrodonta* sp.

Chapter 1 References

The small-scale biofacies cycles, and potential biosubzones, are readily correlatable between adjacent wells, up to 40 km apart.
