Attempts to hold to policies of artificially low rates of yield on securities traded in by central banks could be expected to increase existing disequilibria in these markets. This will be, according to Keynes, the asset with a liquidity-premium most in excess of its carrying cost. There may exist in any such country, regardless of its past history, some range of redistribution which will simultaneously satisfy the proletariat and peasantry while including adequate supplies of capital, both domestic and foreign, for venturesome investment.
