Collection, manipulation, and processing collected data for the required use is known as data processing. The technique is developed in such a way that reduces the data entry errors, as it validates data at various points and also ensures that only corrected data is entered. It is a sort of online processing, which always remains under execution.

On-line Processing This technique facilitates the entry and execution of data directly; so, it does not store or accumulate first and then process.

However, the central computer system maintains the master data base and monitors accordingly.
