Audit Report, Protection Deficiencies at Los Alamos National (Technical Report)

On June 1, 2006, Los Alamos National Security, LLC LANS , became the managing and operating contractor for Los Alamos, under contract with the Department's National Nuclear Security Administration NNSA. Safeguarding against fires, regardless of origin, is essential to protecting employees, surrounding communities, and national security assets.

Forms

Results demonstrated that sealing all accessible foundation penetrations in the basement was an effective way to reduce the radon concentration, although not below the EPA guideline, and that sealing aids in the effectiveness of an active depressurization system.

Audit Report, Protection Deficiencies at Los Alamos National (Technical Report)

Additionally, the FM Global research technical report, Environmental Impact of Automatic Fire Sprinklers, documented water usage with fire sprinklers, stating they could save as much as 91% of water compared to hose-stream discharge by firefighters. A fire protection expert provided technical support during the audit.

Assessing the Reliance of Sprinklers for Active Protection of Structures

Fire Administration, Federal Emergency Management Agency, prepared by Hsiang-Cheng Kung, David M. It includes an analysis of the overall experience and perceived value of home fire sprinklers by homeowners, local government officials, and water purveyors.

Residential Fire Sprinklers Research

LANL is also implementing a series of actions to improve and sustain operations for processing contact-handled transuranic waste inventory. However, most residential fire sprinkler adoption appears to be on the local level where home builders, the AHJ or a community understand the benefits and implement local rules requiring them in new construction. However, unlike passive fire protection, active systems such as sprinklers are

mechanisms requiring a certain degree of motion and response in order to work.
