Canada

Michael has extensively published on the structural setting and petroleum geology of Atlantic Canada and received the 1999 CSEG Meritorious Award.

Structural Setting and Petroleum Potential of the Orphan Basin, offshore Newfoundland and Labrador

Abstract The Orphan Basin region, situated north of the Grand Banks of Newfoundland has undergone repeated extensional episodes. AGU, 85 17, Joint Assembly Suppl.

Corrpro Canada

Available from World Wide Web: Williams, H. Arrows indicate depression where seaway communication between the East Orphan and adjacent basins was possible during Triassic and Jurassic. Not all of them lie within the area licensed for exploration and may thus become available in future landsales Figures 3, 4, 8 and 10.

Lithoprobe

The basin is bounded by the Bonavista Fault zone to the west, Cumberland Belt Transfer Fault Zone CBTZ to the south, Continent-Ocean Boundary COB to the east and the Charlie-Gibbs Transfer Fault Zone CGTZ to the north Figure 2. Smee, 2005a, Newfoundland Orphan Basin-

1, Exploration opportunities abound in Orphan basin off Newfoundland: Oil and Gas Journal, August 8, p. Welsink, 1989, Mesozoic extension and styles of basin formation in Atlantic Canada: in A.
