Managing fishing capacity in tuna regional fisheries management organisations (RFMOs): Development and state of the art

The Code of Conduct forms the basis on which the FAO issued Ecolabeling Guidelines.

Seafood & Health

We are taking a much broader stance now, covering a wide range of harvests that fishing vessels take from our seas. We also work with partners and stakeholders to create effective messages and outreach materials and volunteer programs, as we believe that an informed public is integral to the protection and recovery of our protected species. This natural resource industry sector is highly regulated and often involved in complex litigation.

Fisheries

Many ocean fish are known to be a rich source of selenium. Feedback and guidance for the FIP were provided by the Sustainable Fisheries Partnership. FIP Contact: FIP Activities: An MSC pre-assessment evaluation was completed in November 2009 on the Hawaii longline fisheries targeting bigeye tuna *Thunnus obesus* and swordfish *Xiphias gladius* in the Hawaii-US EEZ and in the international waters of the Western and Central Pacific Ocean.

Fisheries

It will also participate in the regional pilot project for Monitoring Control and Surveillance of large pelagic fishes in the Western Indian Ocean and the regional tuna tagging project. This need for a management plan has risen due to renewed interest in pole and line fishery from within our local tuna industry players.

Pacific Islands

Ecosystem impacts are constantly being assessed and managers, scientists and the fishing sector are working together on solutions. We work

together to conserve and manage domestic and international marine resources in a vast geographical area.
