Climatology: Methods

It also studies the climatic variations, what causes them and tries to make an adequate description of the climate at a certain moment in the history of the earth. The top two time series show remarkably similar variations, with a correlation of 0.

Climatology: Methods

Location of regions indicated by numbers in upper left can be seen in Figure. Sources of historical information include reports and diaries of explorers, settlers, and missionaries; government records; reports of scientific expeditions; and historical geographical and meteorological journals. There is no exact date of the first stage or prescientific stage, but it is known that man always wanted to know the climate, although at that time the climate was viewed from a religious sense.

METHODS IN CLIMATOLOGY

Although the 1980s were worse, the consequences were less catastrophic as some societal adjustments e. The application of statistical methodologies to African historical climate studies has tremendously advanced the spatial and temporal detail, quantification, and completeness of historical records of African rainfall. Since roughly 1990, variability has been concentrated on scales of roughly two to three and five years.

Methods in Climatology

African precipitation is available from GPCC at three different resolutions: 0. Although all African countries are included, the coverage depends greatly on the country and also varies over time.

Climatology: Methods

However, their performance varies considerably in different parts of Africa. The y-axis is the time scale in years, and the x-axis is a nondimensional index of intensity of the peak. It is a fundamental branch in the field of agriculture since it is possible to determine the influence that the climatic elements can exert in a certain region in relation to the cultivation of a certain product, allowing to improve agricultural systems.

Methods and problems in historical climatology

Its level was recorded at temples along its banks even several millennia ago. That is, if r is. Pejml, an agricultural meteorologist, gathered historical climate information as a hobby.
