

[illegible]

This edition was published in 1996

The 11 % decrease in the total tonnage consumption of hazardous chemicals may have been partly caused by a move to produce chemicals hazardous and non-hazardous outside Europe OECD, 2012 , as well as by some substitution of substances of high concern SVHCs with safer chemicals, as also noted by Eurostat Eurostat, 2012. These classes of chemicals exhibit properties that have an impact on human health and the environment and are derived from the hazard statements described under the Regulation on the classification, labelling and packaging of substances and mixtures EU, 2008. It identified the benefits of developing cross-horizontal legislation criteria for the identification of hazards such as persistency and endocrine disruptors EDs , of grouping chemicals more widely, and of addressing combined exposure and mixture toxicity.

## **Hazardous Substances: don't forget these 5 things**

When hazardous substances are present in the workplace, it's very important the risks are properly recognised and dealt with to ensure the safety of all employees.
