The Gambia

The majority of the participants explained that it was difficult to discuss pregnancy issues with their husbands. Additionally the religious rights of the people will become almost non-existent, and unless the child has had an intense reaction to a vaccine, the parents cannot object on medical grounds Beard et al. Yet, as immunization plays into diverse personal, social and cultural worlds, its reception has varied: there is acceptance and increasingly active demand among many, but anxiety, distrust, refusal and resistance among others.

A systematic review of studies that measure parental vaccine attitudes and beliefs in childhood vaccination
