Geospeedometry: An Extension of Geothermometry

A larger data set consisting of experiments at variable pH and Al concentrations is essential to experimentally verify the predictions of these two models. As the catalyst, the dependence becomes nonlinear and for very high catalyst it approaches zero, i. Organic compounds are, of course, ubiquitous in natural waters and the number of different organic compounds potentially present in water is overwhelming - the chapter contains a 5-page table just listing these compounds and their role in water-rock interaction.

Geospeedometry: An Extension of Geothermometry

These basic concepts are then applied to understanding processes in aqueous systems and the Reviews: 1. Chapters focus on geochemical applications in aqueous, petroleum, organic, environmental, bio- and isotope geochemistry, covering the fundamental theory, practical guidance on applying techniques, and extensive literature. Format: Hardcover. The transitions between the different regions of inhibitor rate dependence occur at a constant inhibitor concentration that is independent of the catalyst concentration.

Kinetics of geochemical processes

A generalization on the dissolution rates of minerals. Both the competition model and the independent adsorption model adequately describe the kaolinite data.

Geospeedometry: An Extension of Geothermometry

The slope of log rate vs.
