Changing higher education policies: From the deinstitutionalization to the reinstitutionalization of the research mission in Polish universities

In the 1990s, the International Association for the Evaluation of Education Achievement carried on a comparative survey of civic education in 38 countries, assessing to which extent 14-year-old students gained the knowledge, engagement and attitudes expected from citizenship in a modern society.

How do globalisation forces affect higher education systems?

However, the rate of progress has significantly stagnated since 2007, with virtually no change in the global rate of number of out of school children OOSC, while the percentage of OOSC in conflict-affected countries has increased. In African countries, for instance, the recent wave of expansion in tertiary enrolment went along with a significant expansion of the role of private institutions in higher education Varghese 2013. Globally, most evident is the policy fascination with internationally comparative testing, such as PISA and TIMSS, under the assumption that curricula and student achievements are indeed universal and comparable Kamens and McNeely, 2010.

Changing higher education policies: From the deinstitutionalization to the reinstitutionalization of the research mission in Polish universities

Paper presented at European Association of Institutional Research, September, Berlin.

The hybridization of vocational training and higher education in Austria, Germany, and Switzerland

The New Silk Road will carry more than consumer goods. Himley, associate provost for international education and engagement at Syracuse University, while developing countries are seen as more dynamic.

How does economic complexity influence income inequality? New evidence from international data

In the USA, formal schooling lasts 13 years until around age 18 with some variations between the states. There is a substantial correlation between process quality and various aspects of structural quality and quality of orientation: For example, process quality and student-educator-ratio are related.

The impact of increasing education levels on rising life expectancy: a decomposition analysis for Italy, Denmark, and the USA

This study demonstrates strong associations between education and overall population health, suggesting that education policies can also be seen as indirect health policies. The proportion of the population at age 25 and older with at least high school education more than doubled since the early 1960s to almost 90% in 2015 Ryan and Bauman. These three quality areas are linked to the three levels discussed above: process quality corresponds with the microlevel, quality of orientation with the mesolevel, and structural quality with the macrolevel.

The Netherlands : from corrective to facilitative governmental policies (1991)

In reaction to the centralization of power during the era, the Basic Law granted the states considerable. From the perspective of NPM, promoting competition between schools, both within the public system as well as between public and private providers, is believed to increase the overall efficiency of the system. Furthermore, the mobilization of private sources of funding in the form of fees or the involvement of private educational providers could partly compensate for the lack of public funding, which may be a more important driving force of privatization and marketization in the developing and middle-income countries, where educational aspirations of the newly affluent middle classes are thwarted by public governance failures.
