Among other things, silanes are used as water repellents and sealants. There are four sources for silicon fluxes into the ocean include chemical weathering of continental rocks, river transport, dissolution of continental terrigenous silicates, and through the reaction between submarine basalts and hydrothermal fluid which release dissolved silicon. CaSi_2 , or three-dimensional networks of silicon atoms spanning space e.

Similarly, precursors with three methyl groups can be used to limit molecular weight, since each such molecule has only one reactive site and so forms the end of a siloxane chain. This is called inert pair effect.

Large silicone bands are also sold as utility tie-downs. Sand belongs to the latter category. For a number of organisms silicon is a dietary

requirement, and consequently it is considered a dietary requirement for humans, as well.

Silicon

At higher temperatures, however, silicon becomes much more reactive.
