They must be introduced under pressure since they pass easily through the tubal openings and also flow back through the cervical canal.

Laparoscopy

Uterine cavity adhesions or infections may develop after hysteroscopy. Finally, hysteroscopy permits evaluation of the extension and involvement of the endocervical canal in patients with endometrial neoplasia and offers an important guide in staging and planning treatment for this condition. Ablation of the uterine lining is not performed in women who wish to become pregnant.

Advanced Operative Hysteroscopy & Laparoscopy

Normal activities can usually be resumed within a few days. Recovery The recovery of a woman who undergoes laparoscopy is fast and is usually accompanied by the administration of some pain relievers. Gynecological endoscopy does not require hospitalization, allowing the patient to return

home the same day of the intervention.
