Pinelands Protection Act

State forests managed by the New Jersey Division of Parks and Forests include Bass River, Bass River North, Belleplain, Lebanon, Penn, and Wharton, and state parks include Belleplain, Double Trouble, and Wharton. Atlantic white cedar and red maple swamps at the headwaters of streams, particularly in the Delaware drainage, support a large percentage of the remaining populations of swamp pink in the world.

New Jersey Pinelands National Reserve (U.S. National Park Service)

Pine barren savannas are grass and sedge- dominated wet meadow communities that occur in floodplains of pine barrens streams; they are often separated from the streams by a levee and vegetated by lowland broomsedge *Andropogon virginicus* var. The Pinelands forests along the Atlantic coast marshes are important for migrating and breeding birds and as buffers for the wetlands, and should be preserved.

New Jersey Pinelands National Reserve (U.S. National Park Service)

Cedar swamps support insectivores such as eastern wood pewee *Contopus virens*, wood thrush *Hylocichla mustelina*, and yellow warbler *Dendroica petechia*. All municipalities are required by law to conform their local master plans and zoning ordinances to the regional plan.

New Jersey State Atlas :: Pinelands Management Areas & Ecological Integrity Assessment

A few white cedar swamps in the New York Bight drainage also support this species. The comprehensive management plan established a 136,380-hectare 337,000-acre core preservation district to be maintained in its natural state through strict regulation of development, and a protection area where there are various categories of land use forest, agriculture, regional growth, rural development, pinelands, towns and villages, military and federal institutions based on existing natural features and projected need. Pairs of bald eagles nest in Belleplain State Forest and along the Mullica River, and several of the tidal rivers that drain the Pinelands also appear to be important wintering areas for the eagle.

The Pinelander: Newsletter of the New Jersey Pinelands Commission, Winter 2008

The CMP regulates where development can take place by creating conservation and growth zones and applying stringent environmental standards to all development.

Planning, Conservation, and Education in the Pinelands National Reserve

New Jersey at the time had nearly 1,000 residents per square mile, and parts of northern New Jersey had 40,000 people per square mile. The acidic waters in the Pinelands support a unique algal flora. The Pinelands National Reserve is one of the most integrated regional planning regimes for conservation in the world.

The Impact of Regional Land

Altogether the Pinelands cover all or parts of 56 municipalities and seven counties: Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, and Ocean. In the Environmental Studies program, faculty engage students in the outdoor classroom to study the complexities of balancing development and conservation. Community dynamics of small mammals in mature and logged Atlantic white cedar swamps of the New Jersey Pine Barrens.
