Objective: To determine the amount of substance in a solution of unknown concentration using various titrimetric methods. The hydrogen is ignited by the flame of the candle and burns at the mouth of the bottle, where it comes in contact with the oxygen in the air.

Volume after introducing hydrogen 80. The standard solution is usually added from a graduated vessel called a burette. In some parts of the spectrum the cyanine reflects more strongly than glass; in other regions the reverse is true, while at wave-length 0.
