Multiple species delimitation approaches applied to the avian lark genus *Alaudala*

They are the only vertebrates known to exhibit obligatory polyembryony, i.

Revision of the Genus *Nebo Simon* (Scorpiones: *Diplocentridae*) on JSTOR

Researchers have claimed that distinct juvenile torosaurs have been excavated from a bonebed in the of , basing their identification as *Torosaurus* cf. *Paläontologische Zeitschrift*, 71 :15-22. This could explain why there is not a single endemic *Bicyclus* species across all species groups in the central Congo basin Zone F , while a fairly high percentage of the species occurring in nearby regions are endemics to their respective areas zone E, 17%; zone I, 27% O.

Revision of the medically relevant species of the yeast genus *Diutina*

Dasypus exhibits tooth replacement diphyodonty.

species

Über *Dorygnathus* und andere Flugsaurier.

Torosaurus

Star represents the type locality. The jugal-squamosal suture is vertical or slightly oblique in orientation. The rate of androconial evolution in butterflies is a promising field for future research, and highly variable patterns are found even within *Bicyclus*.
