Maschinenfabrik Köppern

Whichever operation is used, selection of the mixer type depends on the fertilizer composition and requires careful consideration. Our products range from individual components such as motor-driven spindle pumps, pressure intensifiers, valves, pressure vessels, fittings and tubing to complete custom-made systems.

Weigel Hochdrucktechnik GmbH & CO. KG

Systems granulating a single multi-component fertilizer are normally equipped with continuous metering and mixing devices such as belt scales for feeding into mixers. For small amounts of hydrogen metal-hydride storage or liquid organic hydrogen carriers LOHC can be used. They also offer a significant storage capacity.

Hydrogen Compressors

Batch mixing is the preferred method in a system designed for the production of different mixed fertilizers. We manufacture our products in cooperation with licensers of chemical processes using high-precision computer-controlled processing machinery and taking customer demands into account at the highest level of technological standards.

High pressure water jetting technology

Standards are already in place and they currently demand discharge pressures up to 1,000 bar.

Maschinenfabrik Köppern

This paper discusses the requirements for demonstration of this failure mode according to the design code for high pressure vessels ASME section VIII division 3.

High

Unfortunately, the density of hydrogen in atmospheric conditions is only at 90 grams per cubic meter.
