Toxicologic pathology requires the art of pathology to be used in conjunction with sound experimental design, methods and analysis in the pharmaceutical and academic situations, and with sound technique, protocols and analysis in the diagnostic setting, where confounding factors abound. However, one must wonder whether the test results are being interpreted correctly, and—if not—what the impact is of incorrect or inappropriate interpretation on the accuracy of diagnostic decision making based, in part, on laboratory test results. Collaborative development, corporate development, and product development are the strategies introduced.
