Vol. 51, No. 3, SEPTEMBER 1963 of American Scientist on JSTOR

Thus, by varying the column temperature over wide limits, mixtures with wide boiling point ranges could be separated rapidly. The clutch was actuated by the reset switch. He requested that his technical department build him such an instrument.

This pointed out the necessity of calibrating the detector response to known compounds under the conditions of the analysis, that is, the calculation of response factors first noted by Rosie and Grob 7.

Dal Nogare and Bennett observed that with a linear column temperature rise and constant volume of mobile phase flow at the exit, each solute was eluted at a characteristic volume and temperature.
