Dangerous Aquatic Animals of the World: A Color Atlas: With Prevention, First Aid and Emergency Treatment Procedures by Bruce W. Halstead (1992, Hardcover) for sale online

. Experts believe that those colors help warn predators that they shouldn't attack or eat the frogs.

#### BELONIDAE

Belonidae is from the Greek belone meaning needle, in reference to the long, thin body shape and needle-like jaws. As with other surgeonfishes, they have sharp blades on either side of the tail; however, these blades are poorly developed in convict tangs and not typically used for defense.

#### Ruvet (peix)

The female and immature birds are generally green with blue heads. Populations of this jellyfish exist in the marine waters of the United States and Australia.

#### Animal coloration

Divers are thus advised to swim horizontally away from such nests.

### Cá đuối điện thông thường

Den här artikeln har skapats av, ett program en för automatisk redigering. Thayer observed that whereas a painter takes a flat canvas and uses coloured paint to create the illusion of solidity by painting in shadows, animals such as deer are often darkest on their backs, becoming lighter towards the belly, creating as zoologist observed the illusion of flatness, and against a matching background, of invisibility.

#### A Colour Atlas of Dangerous Marine Animals by Bruce W. Halstead, Paul S. Auerbach

Truy cập ngày 4 tháng 11 năm 2010. Those colorful feathers are primarily on the bird's face, and the rest of its feathers are bright green.
