Engineering

They confined the amount of misalignment to the limits that the manufacturers recommend, whereas we considered much greater misalignments, as much as four times the manufacturers recommendations. The user can ask the system to explain the reasons for its questions and to justify its conclusions. Whole towns were supplied by pumps: Nuremberg, Toledo, Gloucester, Bremen, Ausburg, London, Paris.

In 1946, the electronic numerical integrator and calculator ENIAC, the first computer, required about 120 kW for ventilation. The helicopter was used by the French during the war in Algeria 1954—62 and the Americans in Korea and Vietnam 1951,1953. Aircraft stood still at Volkel Air Base due to a shortage of spare parts, while those in Kleine-Brogel in Belgium 68 km south were in stock.

RESONANCE The Silent Killer of Rotating Machinery

PM programs require the equipment to be shut down at regular intervals and inspected for wear, cleanliness, and conformance to assembly and performance tolerances. Nip points occur whenever machine parts move toward one another or when one part moves past a stationary object.

Rotating Machinery Energy Loss Due To Misalignment

Typically, linear-motion-only machines do not reverse direction during each cycle of operation and, as a result, do not generate the spike of energy associated with direction reversal.

Engineering

Productivity of one single gas turbine can reach 35% at 4000—6000 rpm. Each component of the comprehensive system can be considered a distinct expert system that can be developed and utilized independent of the other subsystems.

Rotating Machinery

It can take many forms and run the gamut, and not all of it looks like the straightforward theft you might envision.
