At UT Austin, for example, a current priority is to get searchers set up with the software, information, and skills required to telnet to other online catalogs and information systems on the Internet.

Library Automation Systems and Networks

Drabenstott 138 144 The Library of the Future Librarians could develop expert systems to provide reference assistance to users when reference staff are not available or nearby, to capture knowledge of staff subject specialists when they are not available, to accommodate many users at the same time, to provide bibliographic instruction. Years: Mid 1980s- Partners: Originally a publisher consortium of Elsevier, Springer- Verlag, Pergamon, Blackwells, Acadata and John Wiley. One could imagine a system which would keep a record of users' previous requests and send notices of similar items recently received, when the user logged on to the system.

L'authority control in un contesto universitario: una scelta obbligata [Versione italiana presentata alla Conferenza internazionale] = The authority control in the Academic context: a Hobson's choice [English version presented at the International Conference]

In promotion, tenure, and merit raise decisions, they wonder about the recognition their institutions will give them for the creation of digital artifacts and how citation counts will be handled. Partners: Digital Equipment Corporation, IBM. This model has certain disadvantages: charging for search software use, archival functions performed by publishers, the requirement that scholars go to libraries and consult an intermediary who performs the search.
